PARVAAZ AI ENTREPRENEURSHIP PROGRAMME · SESSION 4

Problem Scouting List

Nishtha Jain · CRN 2315172 · URN 2302627 · Ludhiana, Punjab

01 Palji Bakery

Sarabha Nagar

PROBLEM NOTICED	Staff are asked the same question all day — whether a tray of cream pastries came out this morning or the previous evening. The answer exists only in the memory of whoever baked it, so it cannot be checked, and it is gone when that person is off the counter.
HOW OFTEN	Daily
POSSIBLE TOOL	A bake log. Staff mark each tray as it leaves the oven; a counter screen shows time since baking, and the same data appears on the shop's page so a customer can check before travelling.

02 Vardhman Karyana Store

Dugri

PROBLEM NOTICED	There is no itemised bill. The shopkeeper calls out items while bagging and the customer has no way to follow the arithmetic, so disputes are settled by trust. The shop keeps no record of what sold either, so restocking is decided from memory.
HOW OFTEN	Every order
POSSIBLE TOOL	A simple billing screen: tap items from a saved list, running total faces the customer, sale is stored. The record it produces is what makes reordering answerable at all.

03 Bawa Ice Cream

Shimlapuri

PROBLEM NOTICED	Customers queue and only learn a flavour has run out once they reach the scoop counter. Staff repeat the same information to every person in the line, and people who travelled for one flavour leave with nothing.
HOW OFTEN	Daily, heaviest in summer evenings
POSSIBLE TOOL	A sold-out board: staff tap a flavour once to mark it finished. The same status shows on a public page, so it is visible before anyone joins the queue.

04 Gill Road Service Station

Gill Road

PROBLEM NOTICED	Drivers waiting for a wash crowd the office bay asking whose vehicle is next, because the running order is not written anywhere. Staff are interrupted to answer, and nobody can leave the forecourt in case they miss their turn.
HOW OFTEN	Every order
POSSIBLE TOOL	A queue with position numbers, and a WhatsApp or SMS message when a vehicle enters the wash bay — so drivers can wait somewhere else.

05 Dyal Sweets and Bakery

Gill Road

PROBLEM NOTICED	Weight is written by hand on a slip at the sweet counter, then read and re-keyed by the billing clerk. The same information is entered twice, once in handwriting under pressure, which is where both the delay and the errors come from. At festivals the billing desk becomes the bottleneck and the queue reaches the door.
HOW OFTEN	Daily, and worst through the festive season
POSSIBLE TOOL	A shared order screen. The counter attendant enters item and weight once against a token number; billing opens the same order by that number. The handwritten slip stops existing.

All five are businesses in Ludhiana, each listed with its locality. Every tool named above is software that could be built in this course — no new hardware, no equipment purchase. The list is kept running and will grow through the remaining sessions.
